# SLINGER SCBA WORKSTATION

Only from GearGrid®

◀ Workstation as shown includes two units.

▼ **Quick Connect System**  
Allows for fast, easy connection. Disconnects for convenient transport.

## Introducing another GearGrid innovation – the Slinger SCBA Workstation

Developed in response to an individual fire station request, GearGrid Corporation's new Slinger SCBA Workstation provides a safe, mobile work area designed specifically for inspection, cleaning, maintenance and portability of SCBA equipment after each use.

Initially developed for the Slinger Fire Department in Slinger, Wisconsin, the system was designed as a key component of the department's new BA

room – a central, dedicated area for BA maintenance and refilling.

The resulting Slinger SCBA Workstation offers safe storage and convenient, easy access to all size SCBA bottles. The modular, 75" x 27" x 41" system features a heavy-duty work surface, and quickly connects to create a larger work surface. Individual units easily transport through halls and doorways, allowing the workstation to be brought to the equipment for safer, easier loading/unloading. Interchangeable, adjustable, flat shelves for tools and supplies, also available.

## Design Features

- Heavy-duty work surface and steel frame construction
- Fast, easy access to bottle and tool storage
- Assists in managing inventory
- Units connect to create larger work surface
- High strength 1/4" wire
- Durable powder-coat finish
- Multiple standard colors to choose from; custom colors available
- 950 lb. Locking Casters
